FEATURES

- 3D Design : Talk and be heard naturally
- Adjustable ear loops for individual fit
- Effective seal under eyes and around edges
- Latex Free: All mask and filter parts are made with latex free material to reduce chance of allergy.
- Comfortable most of the year
- Inhale freely through nostrils and mouth
- Minimal condensation
- Wears comfortably for hours
- Wash and wear, even when traveling

Brett Rosen and Melinda Sylvester, from Northern Natural, report: "We have used both the silk and the cotton masks when filling bags with powdered spices like cinnamon, turmeric and cayenne. The cayenne is a good test, since if appreciable amounts get in your nose you really notice it! There was no irritation from the powder when using either mask. (Tried it without, just to be sure, and no question that the mask was working)." They can smell the fragrance of spice without the irritation.

Silk Comfort Mask: The patented (US 5,701,892) I Can Breathe!® Silk Comfort Mask filters nuisance level dust, grass, pollen, dander and mold. Comfortable for cleaning house, moving days, being around pets, walking outside during spring and autumn when pollen and mold spores fill the air. All I Can Breathe!® masks have adjustable ear loops and a pliable nose bar for individual fit and are latex free. The sleek construction of the Silk Comfort Mask holds the fabric away from the nose and mouth so one can talk.

Organic Cotton Mask: The I Can Breathe!® Multipurpose 100% certified Organic Cotton Mask is a comfort mask made with three layers of soft, natural color fabric to reduce exposure to dust, pollen, mold, dander, and lint. No dyes or bleach have been used on the fabric. See the Silk Comfort Mask for the design. Adjustable cotton twill ear loops hold the mask in place. Naturally latex-free.

Organic Cotton & Bamboo Carbon Mask

Shaped like the honeycomb mask, the Organic Cotton Mask with two layers of Bamboo Carbon Rayon sewn between the cotton is washable. The effectiveness of the bamboo carbon may last through washing approximately 50 times. Wash by hand in cool water with unscented detergent, rinse well, roll in towel to get rid of excess water, then hang to dry. Wash a new mask before wearing.

Bamboo charcoal contains many pores and gaps in its structure, making it excellent for adsorption, electromagnetic shielding, and infrared emitting. Besides adsorption, bamboo charcoal is also known to be antibacterial and antifungal. The rayon fiber is embedded with nano particles of bamboo charcoal. Rayon is a fiber composed of regenerated cellulose; in manufacturing the cellulose from cotton stalks, plant pulp is dissolved into a viscose spinning solution, which is then extruded through a nozzle, or spinneret, into an acid bath to reconvert the viscose into cellulose. A similar process, using a silk instead of a hole, is used to make celophane.

The antibacterial and deodorizing benefits of bamboo comes from the nano particles of bamboo charcoal and not chemicals, making the fabric much more acceptable to chemically sensitive people.
